IN THE CLAIMS:

Cancel claim 8, without prejudice.

Amend claim 1 as follows:

1. (Amended) A vibration damper with variable damping force, comprising:

a working cylinder filled with damping medium;

a piston fastened to a piston rod arranged in an axially movable manner in said

working cylinder and dividing the working cylinder into two working spaces;

first and second non-return valves arranged in said piston for respectively

providing a damping force for the rebound and compression directions of the vibration damper;

and

a damping valve arranged in said piston and comprising a valve body and a valve

seat defining a flow path therebetween, said damping valve being arranged in one of said piston

and said piston rod having a variable damping action and arranged in series with each of said

first and second non-return valves, thereby acting in both said rebound and compression

directions of the vibration damper, wherein said damping valve in series with said first and

second non-return valves comprise a sole passage for said damping medium through said piston

between said two working spaces such that said damping fluid is required to flow through said

flow path of said damping valve when damping fluid is exchanged between said two working

spaces in the rebound and the compression directions of the vibration damper.
